

Time to move on? Advancing zero emission transport solutions

Best practices from European Cities & Regions - EUSEW 2019 Side Event

Date and time: Wednesday 19th June, 09:30 – 12:30 followed by a networking lunch

Venue: Scotland House, Rond point Robert Schuman 6, Brussels

Why do we organise such an event? Many European cities and regions are facing bad air quality issues due to emissions, mainly coming from transport sector. At the local level, both public and private stakeholders have the possibility to develop initiatives in order to reduce these emissions. The deployment of alternative fuels vehicles and alternative fuels infrastructure is and will be one of the main challenges they will face over the coming years. Allowing them to exchange experiences and best practices is key to develop and improve sustainable transport and energy systems in European cities and regions.

What do we want to achieve? The event will discuss initiatives implemented or being developed in order to support the uptake of zero emission mobility at the local level. The event will consider light and heavy-duty vehicles as well as cross-cutting issues.

What is the target audience of this event? The event is aiming to attract policy makers i.e. local, national and European politicians and officers, European sectoral associations and key stakeholders of the transport and energy sectors.

Draft Agenda

Time	Schedule	Speakers
09:30 – 10:00	Welcome Coffee
